5. (a) Reports in Zoho Creator – Smart Lost and Found Management System

Aim

To create list reports in Zoho Creator for the lost and found application and to study the other report types that the platform provides.

Reports Overview

Report type	Source and use in this application	Status
List view	Lost Items Report, All Items, Found_Items Report, Claim Requests Report, All Claim Requests	Created (5 reports)
Spreadsheet view	Lost_Items; records edited inline like a sheet	Studied
Kanban view	Claim_Requests; cards grouped by Claim Status	Studied
Calendar view	Found_Items; placed on the calendar by Date Found	Studied
Map view	Found_Items; needs an address-type location field	Studied
Timeline view	Lost_Items; ordered by Date Lost	Studied
Pivot table	Rows = Category, columns = Status, value = count	Studied
Chart view	Found_Items; count of items by Category	Studied
Summary view	Lost_Items grouped by Category	Studied

Description of the list reports

- Lost Items Report (source: Lost_Items): every lost item with contact name, email, item name, category, date and location lost.
- Found_Items Report (source: Found_Items): found items with finder, category, date and location found and the Status; an item shows Claimed after its claim is approved.
- Claim Requests Report (source: Claim_Requests): claimant, claimed item, claim date, proof, claim status and admin remarks.
- All Items and All Claim Requests: second list views of the lost and claim data.

Procedure

1. Open the application in the builder and choose to create a new report on a form.
2. Select the report type List and the source form, choose the columns, and save.
3. Repeat for Lost_Items, Found_Items and Claim_Requests and name the reports clearly.

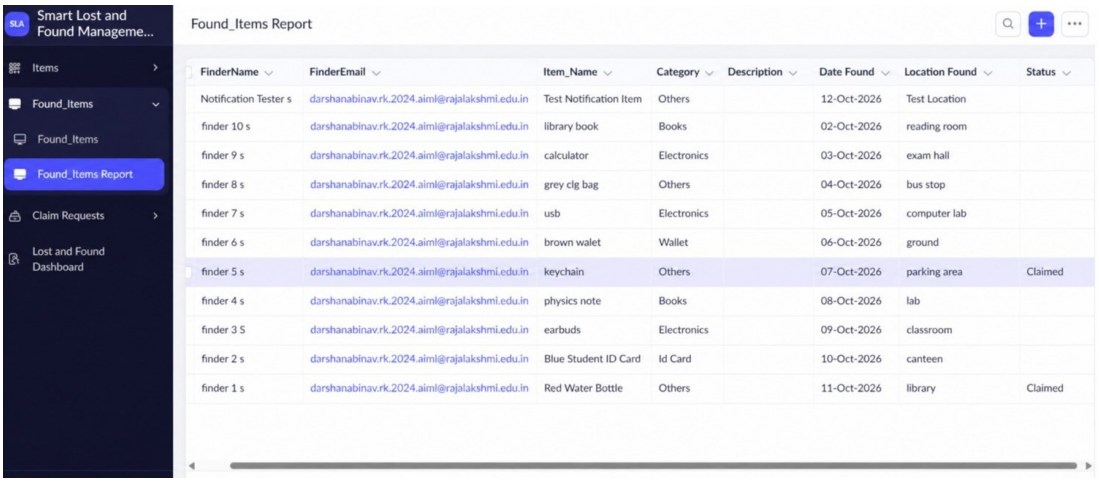

Fig. 5.2: Found_Items Report showing the status Claimed

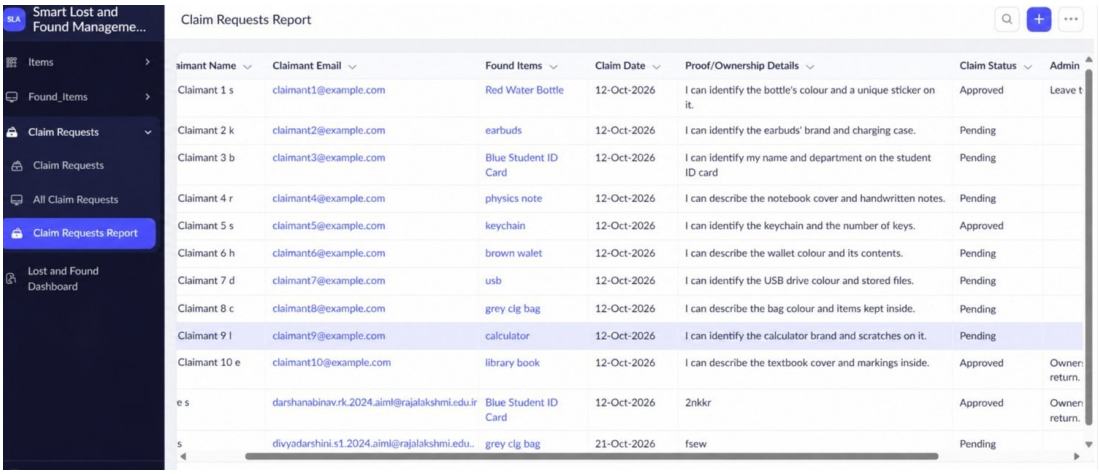

Fig. 5.3: Claim Requests Report

4. Study the remaining report types (spreadsheet, kanban, calendar, map, timeline, pivot, chart and summary) and note where each could be used in this application, as listed in the overview table.
5. Open the five list reports in live mode and check the records against the sample data entered: 10 lost items, 11 found items and 12 claim requests.

Result

Five list reports (Lost Items Report, All Items, Found_Items Report, Claim Requests Report and All Claim Requests) were created and checked against the sample records. The other report types were studied.
