5. (b) Dashboard Page in Zoho Creator – Smart Lost and Found Management System

Aim

To design a dashboard page in Zoho Creator that summarises the lost and found data with count tiles, a chart, a status summary and quick links.

Theory

A Page in Zoho Creator is built in the page builder from elements such as panels, charts, gauges, search boxes, forms, reports, snippets and buttons. A dashboard page gathers the most useful figures and shortcuts of an application on one screen.

Elements on the dashboard

Element	Content seen on the page
Count tiles	Four tiles: Total Claim Requests, Total Actions and two tiles both labelled Total Items
Bar chart	Distribution by Found Item
Status summary	Claim Status panel: Approved, Rejected, Pending and Total
Quick links	Add New Claim Requests, Add New Claim Actions, Add New Found Items, Add New Lost Items
Second chart	Distribution by Claim Request (no data when the page was captured)

Procedure

1. Open the application in the builder and create a new Page named Dashboard.
2. Drag count tiles, a chart, a summary panel and button links onto the page and bind each to the form it summarises.
3. Save the page and open it in live mode.
4. Check every tile, chart and link and compare the counts with the reports.

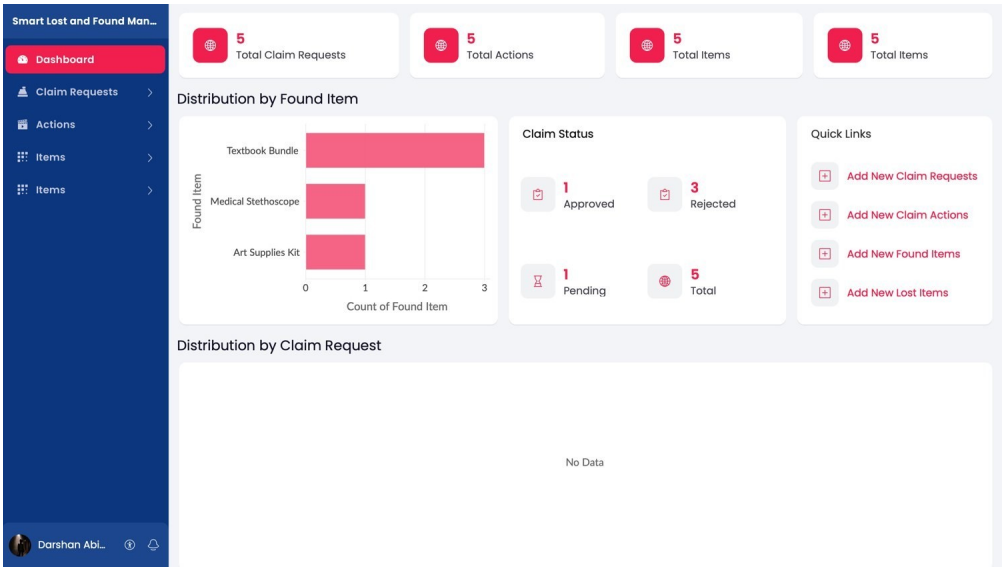

Fig. 5.1: Dashboard page of the Smart Lost and Found Management System

Observation

The dashboard shows 5 claim requests (1 approved, 3 rejected and 1 pending), but the Claim Requests Report holds 12 claims, of which 8 are pending and 4 are approved. The second chart, Distribution by Claim Request, shows no data. This mismatch is recorded as BUG-03 in the project report and is still open.

Result

A dashboard page with count tiles, a bar chart, a claim-status summary and quick links was built for the application and opens from the main menu. Its totals do not yet agree with the reports (BUG-03), so the data behind each element has to be corrected before the dashboard can be relied on.
